

Indications for Use:

- Delay in second stage of labor with adequate assessment of position and station of the fetal head.
- Delay in second stage of labor associated with borderline cephalopelvic disproportion (consistent with the statement regarding "traction of the head" found in the WARNINGS and PRECAUTIONS section of the product insert).
- Fetal distress
- Shortening of second stage labor for fetal or maternal benefit
- Prolapse of the umbilical cord when the cervix is fully dilated

Contraindications:

- Delivery requiring rotation
- Cephalopelvic disproportion
- Incomplete cervical dilation
- Breech, Face, Brow or Transverse presentation
- Intact membrane
- Prematurity
- Previous scalp sampling
- Head not engaged
